EDUCATION AND TRAINING

- **Bachelor of Science, Information Technology** SIES
College of Arts, Commerce and Science Mumbai University
Address Mumbai | **Final grade** 8.98
2015 – 2019
- **Higher Secondary Certificate** Vani Vidyalaya
Final grade 62.15%
- **Secondary School Certificate** St. John the Baptist High
School
Final grade 76%

WORK EXPERIENCE

- **10/2022 – CURRENT** Mumbai, India
SDE (Frontend engineer) FactWise
I am responsible for developing and maintaining various modules and features of 'FactWise', an in-house SaaS product that offers an end-to-end procurement solution for SMB companies. I have collaborated extensively with my team, as well as taken on independent projects to build intricate UIs such as chat systems and analytics pages, utilizing React and TypeScript.
- **08/2021 – 08/2022** Bangalore, India
Full Stack Developer The Better Co.
I was assigned the task of maintaining the website of the company as well as developing the client and admin panels using the MERN stack. I built the web app by myself since I am the only one working as a developer in the company. I created features like adding projects/documents using AWS S3, a real-time chat feature, push notifications, etc. I also worked on a mobile app using the flutter framework.
- **04/2020 – 07/2020** Thane, India
Graphics designer KnatBic
I was assigned the task of creating posts and video animations for their social media. I used design tools like Photoshop, Illustrator, and After Effects for the same.

LANGUAGE SKILLS

OTHER LANGUAGE(S): English - C1 Level

ADDITIONAL INFORMATION

Projects

- **TY Project (E-commerce Website)** In my final year project, I developed an e-commerce website that sells cycles in particular. But unlike the traditional e-commerce sites, this website gives users the freedom of customizing the cycle and previewing it in real-time. It includes some 3D interactive animations on the landing page for better UX. Languages used in this project are HTML, CSS, and JavaScript. The framework used on the front-end was jQuery and Express was the back-end framework.

- **Food Ordering App** Built an application named 'Foodisthaan' in Java Netbeans where users can order food online. It provided a long variety of menu options like veg, non-veg, drinks, and desserts and the list changed dynamically according to the type of preference that you

chose between veg or non-veg. The language used was Java along with MySQL as the database.

Client and Admin side applications for my company Developed client and admin side applications for my company (The Better Co.) wherein the admins could store and maintain client data and files. I also built a chat application from scratch into the app for admins and clients to chat and also send documents through it. The clients can view all the data and documents and also chat and send documents to the admin in the client panel. The application was built using the MERN stack and AWS S3 bucket.
